

## **EXHIBIT A**

THE HONORABLE MARSHA J. PECHMAN

UNITED STATES DISTRICT COURT  
WESTERN DISTRICT OF WASHINGTON  
AT SEATTLE

IN RE: WASHINGTON MUTUAL  
MORTGAGE BACKED SECURITIES  
LITIGATION,

This Document Relates to: ALL CASES

Master Case No.: C09-0037 (MJP)

[Consolidated with: Case Nos. CV09-  
0134 MJP, CV09-0137 MJP, and CV09-  
01557 MJP]

**DECLARATION OF DIANA JEANTY IN  
SUPPORT OF PLAINTIFFS'  
OPPOSITION TO MOTION FOR  
SUMMARY JUDGMENT**

*Declaration of Diana Jeanty in  
Support of Plaintiffs' Opposition  
to Motion for Summary Judgment*  
Case No. C09-037 MJP

1 STATE OF FLORIDA )  
 2 COUNTY OF Duval ) SS:

3 I, Diana Jeanty, declare and state as follows:

4 I am a resident of Jacksonville, Florida, and am over eighteen years of age. If called as a  
 5 witness, I could and would competently testify to the following facts, of which I have personal  
 6 knowledge.

7 I was employed by Washington Mutual (hereinafter, "WaMu") from January 2000 to  
 8 October 2009. I first worked in the Bethel Park PA Loan Fulfillment Center (hereinafter "LFC")  
 9 until 2004, when I moved to Florida and worked in the West Palm Beach Loan Fulfillment  
 10 Center until April 2006. I then transferred to the Jacksonville, Florida LFC and worked there  
 11 until I was laid off in October 2009. I was originally hired as a "junior underwriter," and by the  
 12 end of 2001, I was a "senior underwriter." For the duration of my employment, I worked  
 13 specifically in the WaMu retail channel where mortgage loans were originated by WaMu loan  
 14 agents and internally called "loan consultants."

15 Underwriters and loan consultants were given weekly and monthly "goals" by  
 16 management, which employees in each organization generally referred to as their "numbers."  
 17 For underwriters, this goal referred to the number of loans we were each expected to underwrite  
 18 in a given period. Underwriters were required to complete underwriting on an average of eight  
 19 files per day in order to maintain salary grades, and by exceeding this goal we qualified for  
 20 incentive bonuses. Loan consultants were also given goals expressed in numbers of approved  
 21 and closed loans only, and were paid bonuses over and above their commissions for exceeding  
 22 those "numbers." Both loan consultants and underwriters received their bonuses at the close of  
 23 each month, so there was always a big push at month's end to close as many loans as possible.  
 24 From 2004 through about mid-2007 management at each LFC I was employed urged everyone to  
 25 make their numbers throughout every month.

26 As an underwriter, when I first began working for WaMu, along with other underwriters,

27 *Declaration of Diana Jeanty in*  
 28 *Support of Plaintiffs' Opposition*  
*to Motion for Summary Judgment*  
 Case No. C09-037 MJP

1 I attended various training meetings. Management emphasized the importance of  
2 thorough and objective underwriting to protect WaMu from making "bad loans" and exposing  
3 the bank to unacceptable risk. However, in the period of 2004 through 2007 when WaMu was  
4 making "stated income-stated asset" loans, and offering Option-ARMs and other loans where  
5 borrowers were qualified at temporarily low interest rates, the role of underwriters was very  
6 different from what WaMu management described it should be. The daily underwriting and sales  
7 practices I witnessed were basically the same at each location I worked during this period, in the  
8 Bethel Park, PA LFC, the West Palm Beach FL LFC, and the Jacksonville FL LFC.

9 The normal practice when underwriters determined that loans did not meet applicable  
10 written underwriting guidelines was that management ignored the guidelines so that borrowers  
11 who did not qualify were approved for loans anyway, and this happened regularly every day.  
12 These loans made by WaMu should have been declined for failure to meet underwriting  
13 guidelines if management were to have based underwriting decisions solely on those guidelines.

14 Making exceptions to underwriting guidelines was not a new concept or procedure at  
15 WaMu in the 2004 through 2007 period. Underwriters were trained by WaMu to recognize  
16 where exceptions may be appropriate. We were taught by underwriting and credit managers that  
17 in unique situations, a borrower who fell short of a specific underwriting requirement, but who  
18 had additional resources or other information of creditworthiness (referred to internally as  
19 "compensating factors"), may be considered for an exception.

20 Underwriters in the LFC were trained by WaMu management to determine if those  
21 compensating factors substantially exceeded other requirements the borrower had actually met,  
22 and if the borrower's failure to meet a guideline was not to a substantial degree. In those  
23 situations where we found a relatively small shortfall to meet an underwriting guideline, and a  
24 substantial compensating factor or factors that outweighed any failure, such that declining the  
25 loan would be unfair or even illogical, that such findings might warrant an exception.

26  
27 *Declaration of Diana Jeanty in*  
28 *Support of Plaintiffs' Opposition*  
*to Motion for Summary Judgment*  
Case No. C09-037 MJP

1 WaMu underwriters were taught by WaMu management that exceptions would be  
2 approved in only such unique situations, where the borrower had, through the evaluation process  
3 described above, clearly demonstrated that he or she did not pose any added risk beyond that of a  
4 borrower who completely met underwriting guidelines. However, in actual daily practice from  
5 2004 through 2007, management approved exceptions and regularly made loans to borrowers  
6 regardless of the severity of failures to meet guidelines or the presence of sufficient  
7 compensating factors.

8 WaMu's Sales Department management clearly dominated the decisions made by the  
9 Underwriting Department, Credit Department, and LFC management, to the point where  
10 objective underwriting and risk management was not operative. WaMu management's goals for  
11 sales volume of closed loans drove underwriting decisions rather than the underwriting  
12 guidelines during this time period. Exceptions were approved regularly on loans that did not  
13 meet guidelines, many times based on no reason other than to just make more loans.

14 Borrowers who claimed ("stated") extraordinary incomes for their professions,  
15 questionable employment without longevity, but who had high credit scores, regularly got large  
16 mortgage loans through approved exceptions. Often the debt-to-income ("DTI") ratio for the  
17 size of loan borrowers wanted failed to meet guidelines even by wide margins. DTI exceptions  
18 were commonplace, and these were the most common type of exceptions approved by  
19 management.

20 The underwriting guidelines for FICO scores were in the mid-to-high 700s before or  
21 about early 2006. There were often exceptions approved for lower FICO scores before 2006, but  
22 then this became less necessary. The guidelines came down into the lower 600s, and other  
23 guidelines were relaxed as well. This was when no-doc and stated loans and the policy to qualify  
24 borrowers at low teaser rates of ARMs became the major part of the loan business, and loan  
25 volume substantially increased in early 2006 as well.

26  
27 *Declaration of Diana Jeanty in*  
28 *Support of Plaintiffs' Opposition*  
*to Motion for Summary Judgment*  
Case No. C09-037 MJP

1 Underwriting guidelines required that a borrower's total monthly income must exceed  
2 total monthly debt service, including the new mortgage payment amount, by a specified  
3 percentage; those guidelines averaged about 40% debt maximums. However, management  
4 consistently approved exceptions even when a borrower's monthly debt payments consumed  
5 over 50%-60% or more. Exceptions were granted where debt payments with the new loan  
6 qualified at temporary low interest rates added up to 70% of the borrower's total monthly  
7 income. Many times the loan payments alone exceeded 50%-60% of the borrower's total  
8 monthly income in loans made with DTI exceptions. This calculation still understated the added  
9 risk to WaMu as the DTI ratio was based on the borrower's gross income and assumed only the  
10 low early loan payment amounts derived from temporary low interest rates in Option ARMs.

11 I estimate that 80% or more of the loans being made at the LFC's where I worked from  
12 2004 through 2007 were Option ARMs, the rest were other ARM and interest-only loan types.  
13 All of these had initial low interest rates that adjusted higher, many times substantially higher, in  
14 a certain number of months or years depending on loan type. When the loans adjusted, the DTI  
15 ratio for these borrowers who did not meet the initial underwriting guideline would be far higher.  
16 Underwriters discussed this added risk as I came to realize we were doing little more than  
17 "filling seats" to maintain the appearance of an underwriting department. We realized that our  
18 decisions did not really matter. Loans were made whether we recommended an approval or a  
19 decline. No matter how large a shortfall from guidelines, exceptions were routinely approved by  
20 underwriting managers and/or the Credit Manager, who was Mary Schubert in the Florida LFCs,  
21 but had exception authority for this location and others. As the Credit Manager, Schubert was  
22 designated as the manager in charge of exceptions.

23 Underwriting guidelines were readily available to WaMu employees in the "Underwriting  
24 Manual" in paper form, which was used by underwriters regularly in the course of doing our  
25 work. The manuals were also online for WaMu employees. Loan consultants and processors  
26

27 *Declaration of Diana Jeanty in*  
28 *Support of Plaintiffs' Opposition*  
*to Motion for Summary Judgment*  
Case No. C09-037 MJP

1 also referred to the guidelines frequently, so experienced consultants were able to quickly  
2 identify when exceptions would be needed, and what level or degree the exception was from the  
3 underwriting guidelines. At some point in about 2004 or early 2005, there was a written  
4 "Exception Policy" included in the Underwriting Manual. This was not part of the underwriting  
5 guidelines for the various loan types, it was in a separate section along with other policies and  
6 procedures.

7 The Exception Policy included grids or matrices that described certain ranges of  
8 exceptions for certain underwriting guidelines, and defined the level of authority required for  
9 approvals. In practice, however, this written policy did not control the use of exceptions. There  
10 were often exceptions approved that were beyond the ranges addressed in the policy, exceptions  
11 that underwriters and I referred to as "outside the box." From 2006 to 2007, there were large  
12 amounts of borrowers trying to get loans from WaMu, "stated income / stated asset" and "no-  
13 doc" loans made it easier, especially for self-employed people to obtain a loan. There was a  
14 known tendency for many to claim whatever income they needed in order to get the loan they  
15 wanted.

16 Plus, WaMu's marketing slogan for this time frame was "The Power of Yes," and  
17 exceptions were the way WaMu management found to say "Yes" to loans that did not meet  
18 guidelines. The exceptions that were "outside of the box" from the written Exception Policy,  
19 required approval above underwriting from credit management, or higher, depending on the  
20 magnitude of an exception. These larger "exception requests" were usually submitted by high-  
21 producing consultants who had reputations for getting anything they wanted. Like other kinds of  
22 exceptions, upper management routinely approved these outside-of-the-box type exceptions as  
23 well.

24 When an underwriter recommended that a loan be declined, we documented the reasons  
25 why a loan should be declined and automatically sent it up to an underwriting manager. When I  
26

27 *Declaration of Diana Jeanty in*  
28 *Support of Plaintiffs' Opposition*  
*to Motion for Summary Judgment*  
Case No. C09-037 MJP

1 wrote up reasons why a loan should be declined based on guidelines, I knew that management  
2 would almost always approve an exception anyway. If a loan was declined by underwriting  
3 managers, this was not the end either. Loans that were declined were given a "second review,"  
4 and it was not unusual that in the infrequent occurrences where loans were declined, that after  
5 the "second review" the same loans were made with approved exceptions. The second review  
6 process was described by management as an opportunity to make sure all information had been  
7 correctly analyzed, and that the borrower had an additional opportunity to provide any additional  
8 information that may increase qualification for the loan. However, in my experience, second  
9 reviews just looked at the very same information again and management simply made a different  
10 decision in order to make another loan.

11 Underwriters at the LFC were all under pressure to move loans through the process. We  
12 all had specified levels of underwriting and exception authority. When underwriters requested  
13 more information from loan consultants, I can describe that their usual reactions were to look at  
14 us as if we were committing a crime. Underwriting managers also reacted like they were being  
15 bothered at times when underwriters submitted files recommending a decision to decline or  
16 because they didn't want to approve an exception that was within their authority.

17 Underwriting managers could not approve exceptions that were beyond their authority  
18 level. They submitted those loans to the Credit Manager, Mary Schubert, who also approved the  
19 larger exceptions that underwriting managers either did not want to approve, or that were beyond  
20 their authority. In some cases, large exceptions were submitted to even higher WaMu  
21 management for approval. The management philosophy was clearly to find ways to make more  
22 loans by using exceptions, regardless of how far a loan deviated from underwriting guidelines.

23 I estimate that from January 2005 through January 2007, at least 30% to as much as 50%  
24 of the loans made at the West Palm Beach and Jacksonville LFCs did not meet underwriting  
25 guidelines and required management approval of exceptions. The remaining percentages largely  
26 consisted of loans that only appeared to meet guidelines as a function of very limited reviews

27 *Declaration of Diana Jeanty in*  
28 *Support of Plaintiffs' Opposition*  
*to Motion for Summary Judgment*  
Case No. C09-037 MJP

1 done under "low-doc" and "no-doc" loan categories. There were often times that something  
2 occurred or an issue was discovered in the underwriting process, or when a loan was being  
3 closed, that required a full-documentation manual underwrite in order to make the loan. Almost  
4 always, when these loans were submitted for full-doc reviews they did not meet guidelines and  
5 should have been declined.

6 These opportunities were like a window into the frequency and level of  
7 misrepresentations being made by borrowers on the low-doc and no-doc programs, as the  
8 subsequent full-doc reviews regularly revealed that incomes had been way overstated. For  
9 example, I saw borrower incomes represented to be about \$7,000 per month in low-doc loans  
10 that were approved, come down to about \$2,000 per month upon a full-doc review. Other  
11 examples include finding that a woman was on maternity leave without pay but buying property  
12 on stated income; that a borrower had only begun working at a job he represented to have had for  
13 many years; the "salary" claimed by some borrowers was actually commissions, and some that  
14 had been declining; and another borrower's tax returns showed substantial unreimbursed  
15 expenses that were not deducted from the stated salary, making the actual salary about half of  
16 what was stated.

17 In this ongoing process where some "stated loans" that WaMu initially deemed to meet  
18 guidelines were later subjected to full-doc reviews, it was consistently revealed that most of  
19 those loans did not meet guidelines and would require exceptions, mostly of the "outside of the  
20 box" type. The stated loans WaMu made with exceptions actually required greater exceptions or  
21 to be declined because of the level of non-disclosure and misrepresentation by borrowers.  
22 Underwriters were precluded from requesting documentation to support what was stated by the  
23 borrowers under these WaMu programs.

24 At the beginning of the underwriting process at WaMu from 2004 through 2007, loans  
25 were submitted to an "AUS" (Automated Underwriting System) to determine if the loan met  
26

27 *Declaration of Diana Jeanty in*  
28 *Support of Plaintiffs' Opposition*  
*to Motion for Summary Judgment*  
Case No. C09-037 MJP

1 Fannie Mae or Freddie Mac standards for those entities to purchase the loan for subsequent sale  
2 on the secondary market. The AUS guidelines were often referred to as "DU" (Desktop  
3 Underwriter), and were known to be generally looser than WaMu's own portfolio guidelines.  
4 When the DU system declined a loan for whatever reason, because it either fell short or was  
5 outside of the DU parameters, the loan was referred to the underwriters as a possible WaMu  
6 portfolio loan. Yet, even though these underwriting reviews were done on loans initially rejected  
7 by a more lenient set of guidelines, we rarely declined them as portfolio loans. Many loans that  
8 failed the more lenient AUS system reviews, as would be expected also failed to meet WaMu's  
9 underwriting guidelines when reviewed for the WaMu portfolio. However, by far most of these  
10 loans were made anyway as management approved exceptions.

11 As an experienced WaMu-trained senior underwriter, I found the regular approvals of  
12 exceptions to be personally disgusting. I believe that if underwriting decisions had been left to  
13 underwriters based on the underwriting guidelines that WaMu would still be in business and  
14 selling mortgages today.

15 Of those loans made with exceptions, I estimate that most (over 50%) were "outside of  
16 the box," meaning beyond the ranges written in the exception policy or grids, and those also  
17 required approval of the risk officer or above. Underwriters at the LFC often discussed that  
18 many of the borrowers seeking stated and no-doc Option ARMs, interest-only, or other ARM  
19 types of loans at the time were trying to borrow the most they could for the best homes they  
20 could get. Or, that those who were investors were trying to get more loans for the most  
21 properties they could get, which was more than what they could afford or qualify for under the  
22 underwriting guidelines. The exceptions practice became what defined how much a person  
23 could borrow or how many loans someone could get. This became the normal way of business  
24 from the beginning of the process as loan consultants appealed to their customers by aggressively  
25 assisting and even encouraging them to borrow more than underwriting guidelines permitted.

26  
27 *Declaration of Diana Jeanty in*  
28 *Support of Plaintiffs' Opposition*  
*to Motion for Summary Judgment*  
Case No. C09-037 MJP

1 Many "investor-type" borrowers during this period bought multiple properties, and many  
2 of them financed multiple properties with WaMu. These borrowers usually got interest-only, or  
3 Option-ARM loans that included an option to make interest-only payments, but still regularly  
4 needed management to approve exceptions in order to qualify at the low initial rates.

5 This was the subject of another type of exception, as WaMu underwriting guidelines  
6 specified an allowable maximum number of loans that could be made per borrower, provided  
7 that the borrower met all of the other underwriting guidelines. However, exceptions were often  
8 made that allowed borrowers to get more loans than guidelines permitted, usually for rental  
9 homes.

10 Further, in order to take advantage of lower interest rates, investor-type borrowers often  
11 misrepresented that they were applying for a mortgage on a "primary residence" when the loans  
12 were actually for rental properties. Upon reviews of these loan applications, it was very evident  
13 when this occurred as there were a host of indicators and scenarios that clearly demonstrated  
14 when these misrepresentations occurred. However, management at the LFCs regularly permitted  
15 multiple loan borrowers to get these "primary residence" loans when the facts demonstrated that  
16 many of those were actually for rental properties.

17 Underwriters regularly determined that a loan was not for a primary residence, as  
18 represented by the borrower, during the regular course of underwriting activities on the file. For  
19 example, we regularly looked into whether a borrower owned another property or properties as a  
20 part of evaluating the borrower's creditworthiness and ability to pay on a new loan.  
21 Underwriters at WaMu were trained to look for this type of information. There were instances  
22 where loan applications represented the subject new property as a primary residence, yet the  
23 borrowers still owned far more expensive primary residences, and usually in a much more  
24 desirable neighborhood. I recall such scenarios, like a borrower who owned a primary residence  
25 valued at around seven hundred thousand dollars, and was seeking a primary residence loan for a  
26

27 *Declaration of Diana Jeanty in*  
28 *Support of Plaintiffs' Opposition*  
*to Motion for Summary Judgment*  
Case No. C09-037 MJP

1 home valued at about two hundred thousand. When loan consultants, and sometimes buyers  
2 themselves, were questioned by underwriters about these situations, a typical response was that  
3 the buyer was intending to sell the more expensive home. However, other facts were always  
4 present that further demonstrated these representations to be false.

5 Information concerning instances where borrowers owned other rental properties,  
6 sometimes with other mortgages from WaMu, was readily available to WaMu underwriters and  
7 management. WaMu also offered low rates on second home mortgages, and it was also common  
8 for multiple property borrowers to represent in applications for another property that the loan  
9 was going to be for a second home rather than another rental property. Again, there were many  
10 different pieces of information that demonstrated otherwise. For example, there were borrowers  
11 living in upscale neighborhoods with far less expensive rental properties in lower-income areas.  
12 When borrowers with these profiles represented they needed a loan for a second home that  
13 happened to be located in the same area and price range as the rental properties, this just  
14 logically did not make sense.

15 Another type of scenario that occurred involved buyers with primary residences who  
16 applied for a second residence loan within close proximity but of greater value than their  
17 primary. During the period of 2004 through 2006, before housing prices began to decline, many  
18 of the multiple property investor-type of borrowers were able to flip properties for a profit, and  
19 refinance properties that had appreciated in order to pull out cash. Some then bought more  
20 properties, others bought a nicer, more expensive home, and kept their former residence as a  
21 rental. Some investors bought one property as a primary residence, fixed it up for rent, and then  
22 bought a new residence. In both of these scenarios, the borrowers had at least one rental  
23 property financed as an owner-occupied primary residence, along with their actual primary.  
24 Most multiple property borrowers during the 2004 to 2007 time frame had more than one  
25 "primary residence" with owner-occupied mortgages, when underwriting guidelines only

26  
27 *Declaration of Diana Jeanty in*  
28 *Support of Plaintiffs' Opposition*  
*to Motion for Summary Judgment*  
Case No. C09-037 MJP

1 permitted a borrower to get one primary residence loan for their actual main residence. Usually  
2 this was readily apparent through the borrower's property ownership records, and often WaMu  
3 was the lender for two or more of these primaries that existed simultaneously.

4 Most borrowers who bought two properties or more during the 2005 and 2007 time  
5 frame, got a "secondary home mortgage" for at least one of their properties that they represented  
6 to be a second home. Most of these so-called "secondary residence" loans, by far, were actually  
7 rental properties. Usually, just the price and location alone demonstrated that logically these  
8 were not second residences. Plus, there was other information readily available that  
9 demonstrated a property was a rental. For example, property histories showed that many had  
10 been rentals for years. The appraisals often reflected that the properties were renter-occupied  
11 with long term tenants even though the borrower was representing the loan was to be for the  
12 borrower's primary or secondary residence.

13 I refused to sign off on these misrepresented primary and secondary home mortgages.  
14 Instead, I informed an underwriting manager of my findings that contradicted what the borrower  
15 represented. I also conveyed my questions about these loans to management. For example, I  
16 asked things like "Why would this borrower who has money, a family in a nice big home, in a  
17 very good neighborhood, want to buy a small, run-down rental in a poor neighborhood as a  
18 second home or a vacation home?" I also asked questions like "Why is a borrower with a nice,  
19 big, primary residence in a nice neighborhood buying a new primary residence that is half as  
20 expensive and in a bad neighborhood, and when the nice big primary is not even for sale?"

21 Management consistently made these primary and secondary loans even though the  
22 borrowers had clearly misrepresented the purchases and the facts demonstrated that these were  
23 actually rental properties. This happened often, even when WaMu was the lender for a  
24 borrower's multiple primary residences, or multiple combinations that resulted in more than one  
25 primary, and/or more than one secondary. In general, those mortgages that were actually for  
26

27 *Declaration of Diana Jeanty in*  
28 *Support of Plaintiffs' Opposition*  
*to Motion for Summary Judgment*  
Case No. C09-037 MJP

1 rental properties were many times misrepresented to be for primary or secondary residences, and  
2 this information was readily available and reviewed by underwriters and management.

3 I estimate that of all loans made at the West Palm Beach and Jacksonville LFCs from  
4 2005 through mid-2007, about 30% were Option ARMs made as lower interest primary or  
5 secondary residences when in fact those were purchased by investors to be rental properties. The  
6 multiple property-type borrowers regularly used the same high producing consultant to submit  
7 their applications, and those consultants were almost always able to get any loan made the way  
8 they wanted. This is another example of how sales ran the LFCs and routinely overrode adverse  
9 underwriter decisions and the written underwriting guidelines.

10 Underwriting guidelines for loan-to-value (LTV) were also often bypassed and  
11 exceptions were routinely approved, permitting borrowers to make smaller down payments and  
12 borrow a higher percentage than permitted by those guidelines. All underwriters were given  
13 authority to approve a 5% exception, so borrowers immediately got an extra 5% in financing.  
14 Exceptions for more than 5% were regularly approved up to 90%, even 100% value. In addition,  
15 it was obvious that appraisals were often inflated by appraisers. I saw files where prior  
16 appraisals recently done by an appraiser were far lower than by a new appraisal re-done by  
17 another appraiser that reflected a significantly higher value before loans were submitted to  
18 underwriting.

19 Requests for exceptions were generally made in two ways. First, when an underwriter  
20 wrote up their reasons to decline a loan, this was documented in file notes in the WaMu loan  
21 system and in an email sent to the loan coordinator, their manager, and the assigned loan  
22 processor. This happened frequently, and the typical response from the sales consultant was to  
23 forward the underwriter's recommendation email to the risk officer (Schubert) and request  
24 approval of an exception. Usually the email was then forwarded back to me by Schubert saying  
25 to "go ahead and approve," or that she approved the loan herself. Sometimes when the file came  
26

27 *Declaration of Diana Jeanty in*  
28 *Support of Plaintiffs' Opposition*  
*to Motion for Summary Judgment*  
Case No. C09-037 MJP

1 back to me after I received emails approving exceptions, whether from Schubert or an  
2 underwriting manager, there was only their management signature approving with no  
3 explanation.

4 I often asked the approving manager about their basis for approval, and usually the  
5 response from underwriting managers or Mary Schubert was "We're ok with that," or "We're  
6 fine with that." Management just approved exceptions without any underwriting reason or any  
7 identified compensating factor, and without any new information from the borrower. Some of  
8 the reasons were pathetic to me, and I expressed my reactions at times by saying things like "Are  
9 you serious?" Sometimes, I was told that a borrower had a second job or some form of  
10 additional income not in the original application. Yet, usually there was no backup  
11 documentation to support that statement, or just some notes in the file by management or some  
12 document that looked to me it had been prepared by the loan consultant. In these situations, I  
13 never saw a document from an employer of the borrower proving more income than what an  
14 application originally reflected. Ultimately, exceptions were routine and loans were rarely  
15 declined during the 2004 through 2007 period.

16 Underwriting procedures at WaMu required exceptions to be documented in loan files.  
17 However, many times this was not done. To determine those loans that did not meet guidelines  
18 and were made anyway with exceptions, would require a full re-underwriting of the loans at the  
19 LFCs because it was common for exceptions to be approved without any documentation in the  
20 file itself. The notes made by underwriters and management in the electronic loan origination  
21 system sometimes explained exceptions and sometimes only approvals of exceptions were  
22 written there, however it was not common for those notes to be printed and put in files.

23 The second way requests were generated was when experienced and high-producing  
24 consultants recognized before submission of a loan to underwriting, that a large exception would  
25 be needed. These large producers had a lot of power and often went directly to Mary Schubert,

1 or LFC management for approval, bypassing the processors, underwriters, and even underwriting  
2 management right at the beginning. Typically these exceptions were approved like everything  
3 else, and once upper management approved an exception the file came back to an underwriter to  
4 complete for closing. Underwriters could see this process by reading the email string that came  
5 with exception approvals in this scenario even before we got the loans to underwrite. This is  
6 another example of why underwriters had no credibility, and how the sales department was really  
7 in charge of the LFCs.

8 Also, when underwriters requested additional information from loan consultants in order  
9 to make underwriting decisions, many times the consultants did the same thing and went directly  
10 to management. The bigger producers did not bother with these types of issues that delayed their  
11 production of closed loans. Rather than obtain additional information from borrowers to try and  
12 meet underwriting guidelines, the consultants usually just emailed either the Credit Manager or  
13 higher management at the LFCs, or even risk management at the corporate office to request  
14 approval of exceptions. Then the approving manager notified the underwriter by email that an  
15 exception had been approved and to complete remaining work so the loan could be funded.

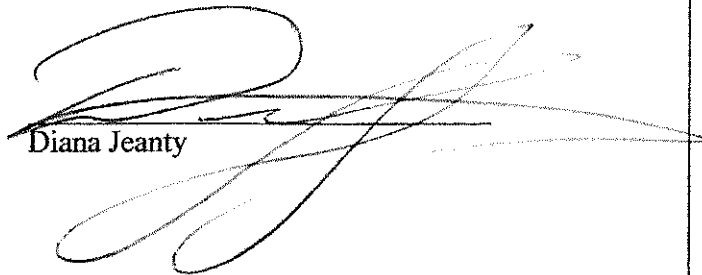

16 I recall one woman who applied for a \$500,000 loan on a home of about the same value.  
17 She had no prior mortgages and was trying to get a 1-month ARM where she could qualify at the  
18 low teaser rate. Her stated income was \$25,000 for the year. The DTI ratio was ridiculously  
19 high, but management cited her down payment and money she had in the bank. I calculated that  
20 once the payment adjusted upward her money would be gone in a few months when making the  
21 higher payment with her income. I asked underwriting managers "Are you serious?" and "Are  
22 you sure about this?" I cautioned that the woman would not be able to keep up with the loan  
23 once it adjusted, but management approved the DTI exception and made the loan anyway.

24 Underwriters discussed internally how these exception processes were frustrating and just  
25 wrong because WaMu's underwriting credibility was destroyed by the constant approval of  
26

1 exceptions by WaMu management. We often discussed that many people were getting loans  
2 they could not afford, and that there would be high default rates starting in the near future.

3  
4 I declare, under penalty of perjury, that the foregoing is true and correct. Executed on  
5 May 17, 2012.
